

Appendix 4 Satellite Compass (SC-30)

4.1 How to Update SC-30 with PC

Following describes how to update SC-30 with a Windows XP PC.

Connection

(1) Without Interface Unit (IF-NMEASC)

Connect the COM port on the PC to the RS232C port on the SC-30 with the cable, MJ-A10SPF0015 or MJ-A10SPF0017.

Necessary parts

1 x MJ-A10SPF0015 (00016689111) or MJ-A10SPF0017 (00016688912)

1 x 9-pin D-SUB female connector

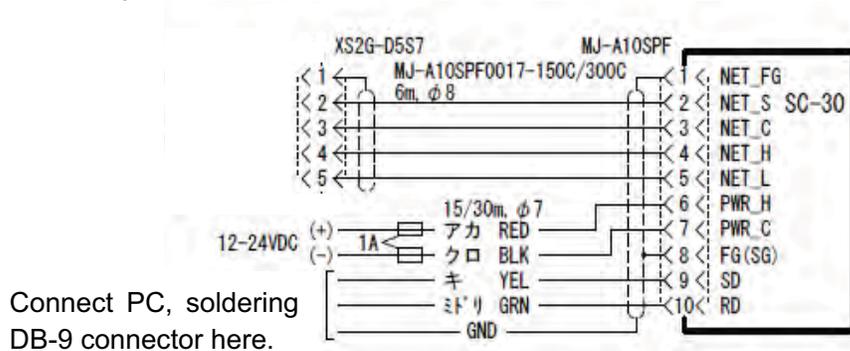

Fig.1 Connection of PC to SC-30 with MJ-A10SPF0017

(2) With Interface Unit (IF-NMEASC)

Connect a USB cable between the PC and the IF-NMEASC.

Necessary parts: 1 x USB cable

Step 1. Editing BAT file

When the COM port to be used on the PC is other than COM1, the BAT file is edited as below.

1. Open "up301.bat" file in notepad to read the COM port number assigned for SC-30. The following line should appear. The COM1 is assigned for SC-30 as a default value.

Increase this number when the batch file fails to execute. **(100 to 200)**

```

uppg.exe loadsiog.bin sc301g.bin 0 0 10 0 1:57600 0 LD1/3 ES23-38

```

COM port number for SC-30

2. Change the COM port number.

When the PC is connected to SC-30 with a USB cable via the IF-NMEASC, check the COM port number in use by following steps below and edit the BAT file, if necessary.

1. Right-click My Computer, and select Properties > Hardware > Device Manager.
2. Click the plus (+) next to "Ports (COM & LPT)" to see COM port assignments. In the example of Fig.2, SC-30 is assigned to "COM4."

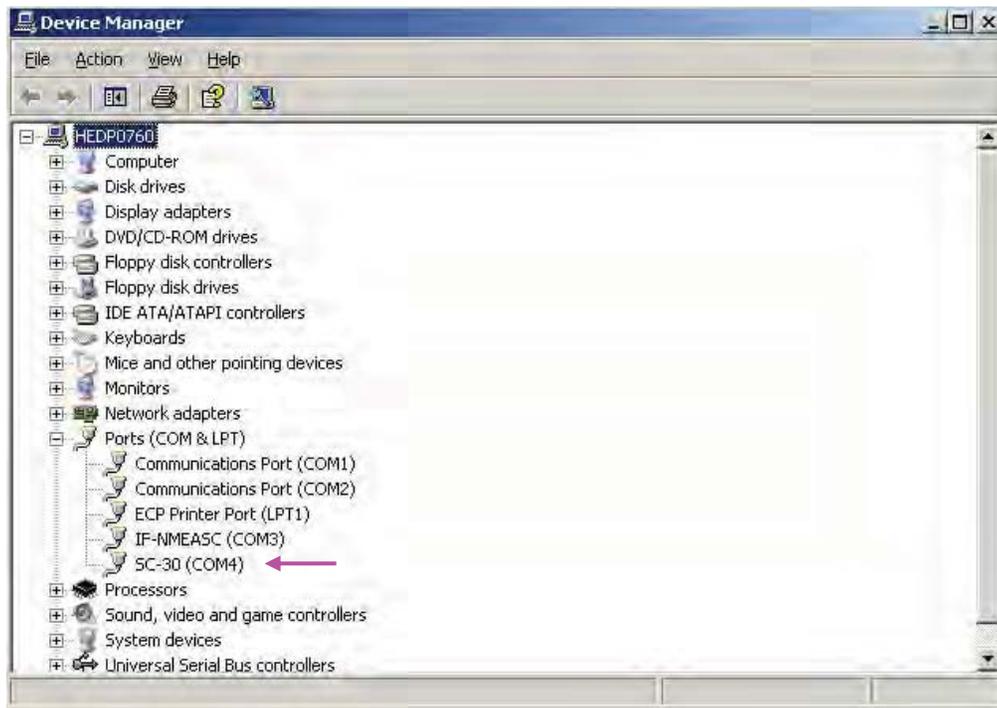

Fig.2 Device Manager

Step 2. SC-30 software update

3. Turn on the SC-30 and then, execute "up301.bat" file. If the batch file fails to execute, edit the BAT file: change the number underlined in the text one at a time as described in step 1.

Updating proceeds automatically. At the end of the process, "100% completed" message appears. Figs.3 to 5 show the PC screens during updating.

```
C:\WINDOWS\system32\cmd.exe
c302g.bin 0 0 40 0 3:57600 0 LD1/3 ES23-38

```

Fig.5 Writing New Program

Step 3. Verification of program number

After updating is complete, read the software version by using “SC30Tool.”

1. Execute Maintenance tool, “SC30Tool” (See 4.3 How to use SC30Tool in this appendix).
2. Click **Search**.
3. Ensure that software version of SC-30 is 2051522-xx.xx.
